Hardik Sharma	1024150317
Krishna Bhardwaj	1024150316

Topic Description

The **Smart College Placement Management and Eligibility System** is a database-based system designed to simplify and manage the college placement process. It maintains structured information about students, companies, job opportunities, eligibility criteria, applications, and application statuses.

The system stores student details such as **branch, CGPA, graduation year, and backlogs** and compares them with the eligibility requirements of available placement opportunities. Based on this information, it identifies and displays only the opportunities for which a student is eligible. Students can search for suitable opportunities, apply for them, and track their application status.

The system also allows the **placement coordinator to add, update, and delete placement opportunities** and their eligibility criteria. Placement opportunity data can be initially provided through **CSV files**, while the SQL database manages the relationships and operations on the data.

As an optional feature, the system can be connected to the **placement cell's Gmail account** to retrieve placement-related emails and use their information to update the database, reducing the need for manual data entr

Requirements (which will be satisfied by the system) :

- The system shall store basic student details such as college email, branch, CGPA, graduation year, and backlogs for eligibility checking.
- The system shall retrieve and store placement-related emails received from the placement cell, including sender, subject, content, and date.
- The system shall maintain important placement information such as company name, job role, package, eligibility criteria, and application deadline.
- The system shall match student details with placement eligibility criteria and display only relevant opportunities.
- The system shall provide search and filtering of available placement opportunities.
- The system shall allow students to apply for eligible placement opportunities.
- The system shall maintain application statuses such as Applied, Shortlisted, Rejected, and Selected.
- The system shall allow the placement coordinator to add, update, and delete placement opportunities.
- The system shall support importing structured student and placement data through CSV files.
- The system shall support Gmail integration to retrieve placement-related emails from the placement cell automatically.
